

## INDUSTRY READINESS PROGRAMS

# CERTIFIED SPECIALIST IN FULL STACK DEVELOPMENT (.NET)

Full Stack Development in the .NET framework involves integrating front-end and back-end components to build scalable web applications. Proficiency in ASP.NET MVC, HTML, CSS, JavaScript, and front-end libraries like Bootstrap is essential for creating engaging interfaces. On the back end, ASP.NET Core and C# are central for developing server-side logic, with Entity Framework simplifying database interactions. Knowledge of Web APIs enables seamless communication between components, while skills in Microsoft SQL Server, Git version control, and deployment round out the comprehensive expertise needed for .NET full stack development.
